

Summarize, represent, and interpret data on two categorical and quantitative variables.

Standard II.S.ID.5 Summarize categorical data for two categories in two-way frequency tables. Interpret relative frequencies in the context of the data (including joint, marginal, and conditional relative frequencies). Recognize possible associations and trends in the data.

Concepts and Skills to Master

- Use a two-way frequency table to show the relationship between two categorical variables.
- Find and interpret joint, marginal and conditional relative frequencies.
- Analyze possible associations and trends in the data.
